

Haystack Home Replacement

EPA OSCs are demolishing this house with elevated levels of gamma radiation. The foundation was made using waste material from the Haystack mining area. Seven Navajo residents lived in this 600 square foot home.

The new home, being constructed by Navajo Nation Community Housing and Infrastructure Development, is in the background by Haystack Mountain. The new home is a 4 bedroom, 2 bath, ADA home. The house will be completed and the residents will move in by September 1.
